Title: Method note: Stamping a URL into a research PDF

Method note: Stamping a URL into a research PDF

Practice document for Ankita Jagdeep / Infinity Foundation research library.

Why stamp page 1?

When a source is a web page (catalogue record, news article, blog essay), browsers and paywalls change. A local PDF with the Original URL and Archived date on page 1 keeps provenance visible even if the link dies. Page 2+ holds a short fair-use summary or key quotes — enough to browse offline, not a pirate copy of the whole site.

Manual checklist (print to PDF)

1. Open the page in a desktop browser.
2. Print → Save as PDF (or Print to PDF).
3. Optionally prepend a one-page cover in a word processor: Original URL, Archived date, Title, your initials.
4. Save under Research Library / PDFs / {Category} / with a kebab-case filename.
5. Add a row to library.json pointing pdfUrl at PDFs/... and originalUrl / waybackUrl as needed.
6. Refresh index.html (or just reopen it) and confirm Open PDF works.

Later automation

A small script (reportlab, weasyprint, or similar) can generate the stamp page automatically from a URL + title. Keep human review: copyright, completeness, and whether Wayback is needed.

Copyright caution

Only host PDFs you own rights to, that are public domain, or clearly licensed for this use. Do not mass-upload copyrighted books. Stamped summaries of catalogue pages are research notes, not substitutes for licensed full texts.
